INFINITY

INFINITY PRODUCT CATALOGUE

Storage solutions for commercial vehicles

ABOUT US

Gentili have been supporting van users for 40 years, providing our customers with **equipment** which is innovative and of the highest quality.

Infinity is **our van racking solution**, designed and manufactured in Italy.

Infinity meets the most harsh user demands, offering improved performance and advanced technical design.

This is our company mission: **to look beyond and design the future.**

INFINITY racking is the perfect choice for your vehicle, whether you are a sole trader or a fleet manager with 100's of vehicles.

Infinity boasts a host of innovations and advanced technical design features, making it the most reliable and versatile van racking solution available.

Infinity is light-weight but high-strength. The anodisation of the aluminium extrusions, used in the range, prolongs the usable life-span of the product by further protecting against corrosion.

The Infinity range is environmentally friendly, not just by its weight-saving features, but by being 100% recyclable at the end of its use.

Infinity is designed and manufactured by Gentili, allowing us to ensure the product meets the highest customer expectations and ensuring we maintain the highest quality standards.

INFINITY

100% extruded aluminium

TÜV GS CERTIFIED AND CRASH TESTED ACCORDING TO ECE R17.

Carrying a big load? Not a problem.

With Infinity you maximise space and increase carrying capacity.

LIGHTWEIGHT

Infinity is up to 30% lighter than traditional steel commercial vehicle racking. This allows for either an increased load capacity or a saving in fuel and reduced wear and tear (and maintenance costs) of the vehicle.

ROBUST

Infinity's structural design is far stronger than traditional pressed steel sheet racking. The extruded components make the whole racking structure more stable and offers improved safety.

SAFE AND CERTIFIED

Infinity has been tested according to ECE R17 and has been awarded the prestigious TÜV GS certification.

EASY TO INSTALL

Because of the accurate design features and by our engineers paying attention to the smallest of details, Infinity is easy to assemble and install. An assembly and installation guide has been produced and is available to operators and installers to aid quick, efficient and safe installation.

VERSATILE

With Infinity, extending the life of the product or making amendments to fitted racking is easy. Damaged parts or changes to a fitted unit is achieved simply. Gentili can supply profiles cut to precise measurements to allow for repair or amendments during the products life.

ECO-FRIENDLY

Anodised aluminium, from which Infinity is made, is a high quality product offering resilience to ageing and oxidation. It can be transferred from vehicle to vehicle endless times; and when it comes to its end of life, plastic parts can be separated easily from the aluminium structures, both of which can be then sent for recycling, making our product one of the most eco-friendly van racking solutions available.

INFINITY ESSENTIALS

Gentili offers a wide range of essential products and accessories to customise your INFINITY racking solution

FLOOR LININGS

We offer two options:

- 1) Cut to measure 9mm Phenolic coated birchwood ply. The phenolic coating is water repellent and resistant to oils and acid spills. It also offers anti-slip properties. Aluminium trim is supplied at exposed edges by rear and side door apertures.
- 2) 2mm aluminium sheet with 2mm raised treads.

WALL LININGS

We offer two options:

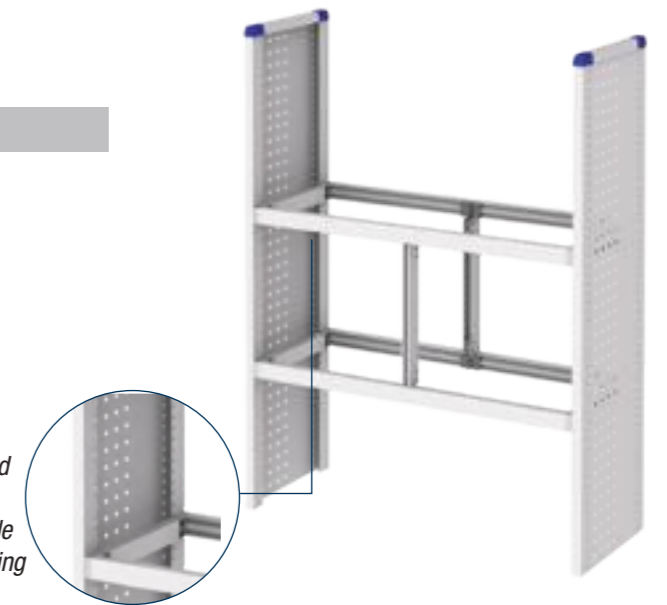

- 1) Grey 3.5mm Polypropylene lining, which fits easily to van contours. Polypropylene is 100% recyclable, lightweight, high-impact resistant and easy to clean.
- 2) 2mm aluminium sheet with 2mm raised treads.

RACKING FRAMES AND SIDE PANELS

The Infinity main structure is made up of the following parts:

- Side assemblies; these are made with anodised extruded aluminium profiles and secured to the square horizontal support frames.
- Square horizontal support frames; these are used to strengthen the entire structure and tie the other components together. Made from aluminium profiles joined together with die cast aluminium connecting blocks and stainless steel fixings.
- Perforated side panels; these are used to cover the side assemblies and are the ideal solution for operators wishing to carry spare parts or tools by inserting tool hooks.

BASE UNITS

Base units are the foundation of the racking solution. The lower side panels create the outer parts of the base units. Base units are available in these versions:

- Base unit with a completely open front.
- Base unit with up and over door assisted by gas struts.
- Base unit with drop down door.

Base units fit at the bottom of the racking and overcome the problem created by wheelarch boxes. All three options help to optimise the load space available and provide useful space for storing heavy materials and tools.

DRAWER UNITS

Available in an array of sizes, these are made by using extruded aluminium panels and high quality telescopic drawer slides to ensure a smooth opening and closing operation. A pair of telescopic drawer slides have a 50 kg load capacity. All the drawers are supplied with a soundproofing non-slip rubber mat and aluminium dividers are available as an accessory.

STANDARD SHELVES

Shelves are ideal for transporting various materials, small components and tools safely. They are available in a vast array of sizes, with and without a drop down door front, and supplied with a soundproofing non-slip mat. Dividers are supplied as an accessory.

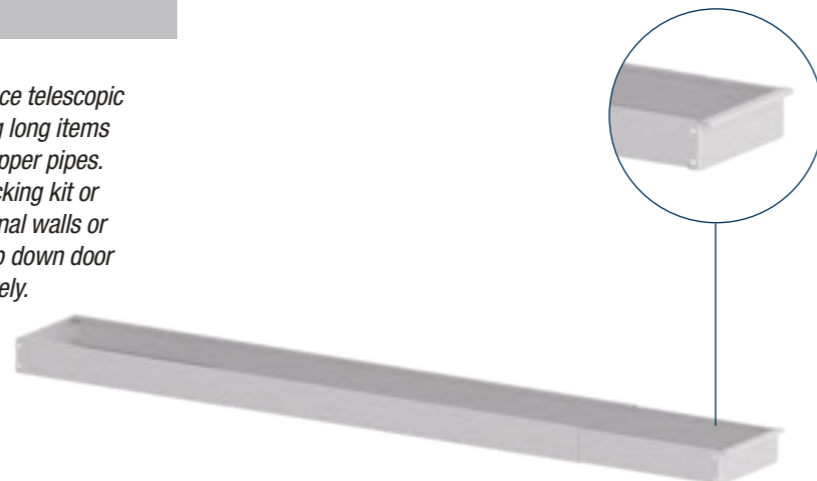

TRAYS WITH REMOVABLE BINS

These are specifically designed trays which hold removable plastic bin containers in place. Plastic bins come in different sizes and are ideal for safe transport and storage of consumable items.

EXTENDABLE TOP SHELVES

The extendable top shelf is a two piece telescopic tray ideal for storing and transporting long items such as tubes, rods, conduits and copper pipes. It can be mounted on the top of a racking kit or can be bracketed to the vehicle internal walls or roof cross struts. At one end is a drop down door making sure items are stowed securely.

PULL OUT TRAYS

Pull out trays are a valid alternative to the standard drawers, when using removable service cases to carry small components parts outside the vehicle.

SERVICE CASES

These small parts cases are stored onto the pull out trays when the vehicle is in transit and they are ideal for storing fuses or fixings such as nuts and bolts. The removable service cases are made from strong and durable plastic; designed to last in the most extreme circumstances.

LOCKERS

Lockers are available in different sizes and are ideal for securing items such as personal belongings, PPE or hand held tools. They are supplied with a single door and come equipped with internal shelves and incorporate a key lock handle.

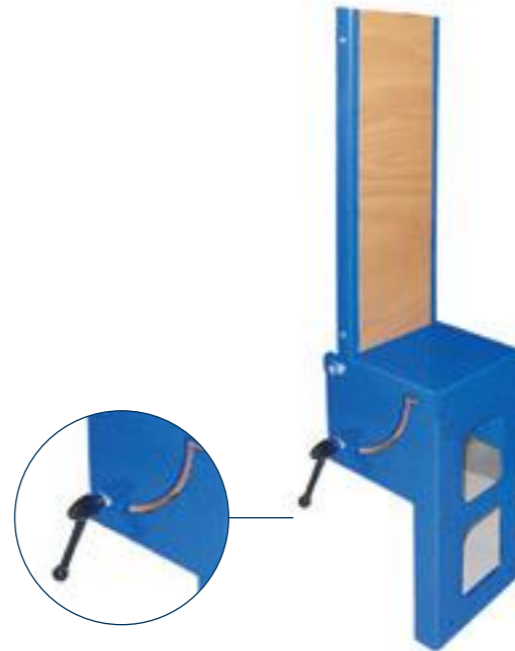

PULL DOWN HEAVY DUTY WORKBENCHES

These highly practical and heavy duty workbenches are designed to carry a vice and they fold away to only take up the smallest amount of space whilst not in use. They are designed and installed to deploy outside the vehicle, to allow maximum working space. Deploying and returning the workbench is easy thanks to the hydraulic strut supplied as standard.

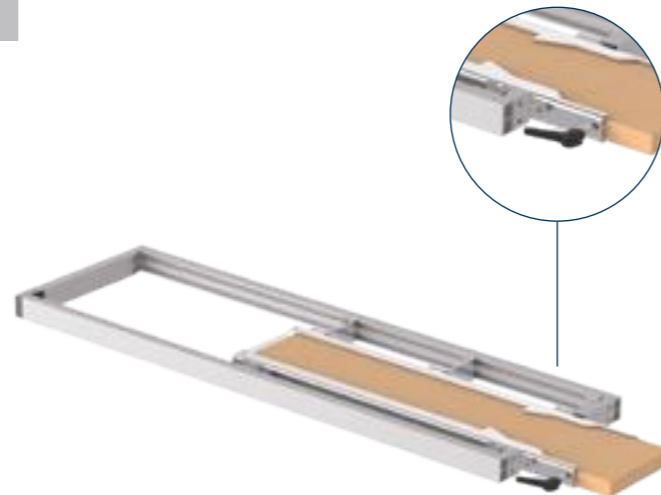

PULL DOWN LIGHT DUTY WORKBENCHES

These workbenches are ideal for small light duty maintenance jobs. A locking handle will keep the workbench in a horizontal position when in use or vertical position when the vehicle is in transit.

EXTENDABLE WORKBENCHES

These workbenches are ideal for small light duty maintenance jobs and are installed between the base unit and the rest of the racking to allow maximum space optimisation. They slide in and out and are secured in place by a locking handle.

STANDARD **KITS**

These typical standard kits come in many different layouts to suit most of the light commercial vehicles on the market and show examples of popular Infinity units.
