“G POD” PICK-UP BODY

Transforming any pick-up into a perfect multi-purpose utility vehicle

“We have designed our G POD to provide solutions to our customers who work in the most demanding environments”

Ernesto Gentili

A stylized, handwritten signature in white ink, appearing to read "Ernesto Gentili", is positioned below the printed name.

Further enhance your 4x4 vehicle with a G POD body; giving operators a perfect solution allowing them to work comfortably on difficult terrains.

The G POD, a unique product, available in 3 varieties, offers plenty of loading space and has been designed to stand up against the most severe demands and stress.

- ▶ *Designed to offer improved performance.*
- ▶ *Tested extensively and to enhance loading capabilities and performance.*

Once the G POD body is fitted onto a 4x4 pick-up, the vehicle will be able to reach the most remote areas, often by travelling on rough terrain; allowing utilities and similar operators to effortlessly deal with specific and challenging operations.

Gentili have focused on the creation of an off-road utility vehicle, with specific materials used in the construction of the body, letting users operate in the most challenging of situations.

***MAKING THE TOUGHEST
JOB EASY***

ERGONOMICS - 270° ACCESSIBILITY

The G POD offers you extraordinary new levels of access to your tools and materials, all done safely and easily.

The G POD comes as standard with two aluminium roller-shutters, making it easy for the operator to access the storage area. These shutters run along purpose made guides and their opening and closing is facilitated by a recoil mechanism.

A water drainage channel protects the apertures from unwanted water entry. Keep your tools and equipment safe with the key lock on each shutter, supplied as standard.

At the rear of the G POD body a gas strut assisted rear hatch will give easy access to the rear loading area of the body, also fitted with a key lock as standard as well as a high level 3rd rear brake light.

SINGLE GRP MOULDING, STRUCTURAL STRENGTH AND IMPROVED LOADING SPACE

By combining quality steel tube and reinforced fiberglass, we have created a lightweight solution with high performance inner strength.

**SINGLE-MOULD
